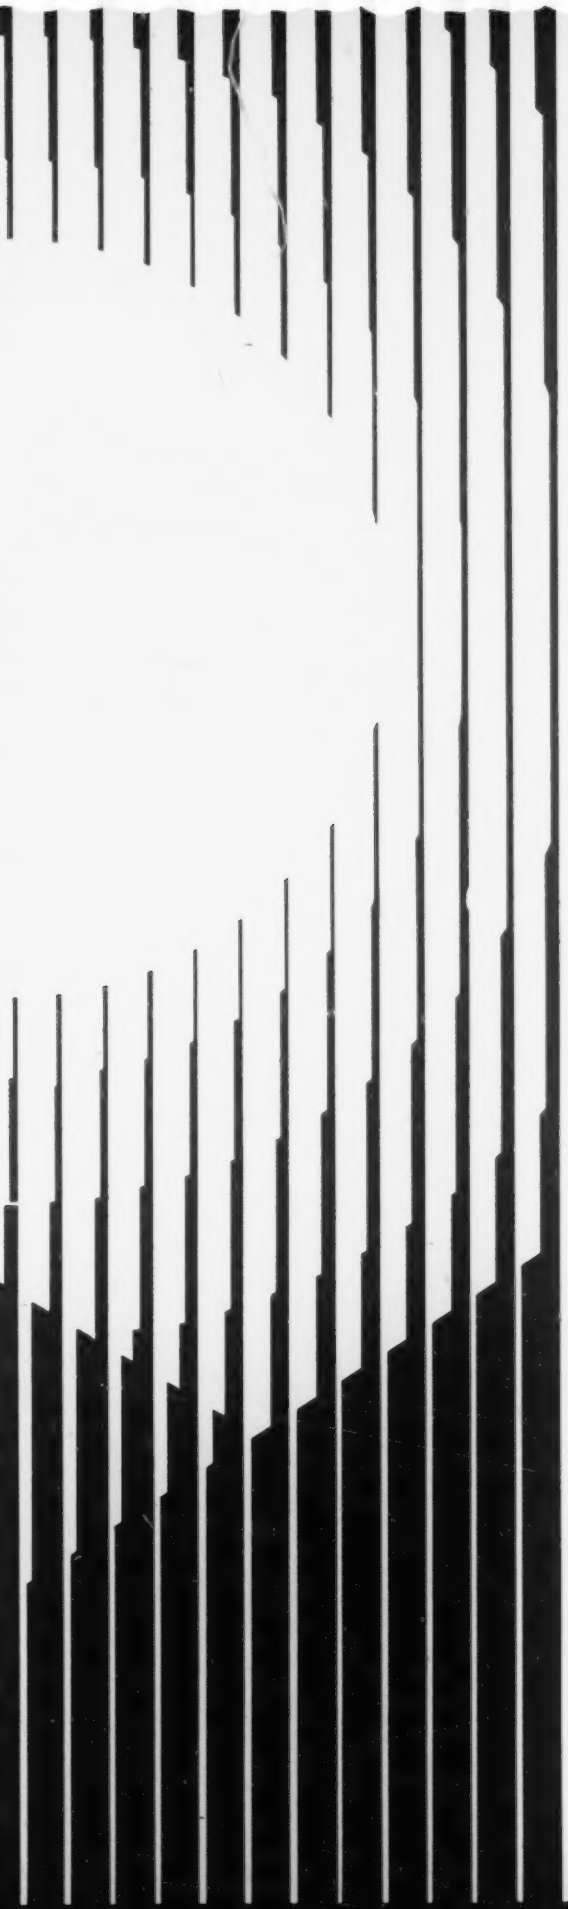
Preface

1990 Public Library Statistics

This publication is our fifth annual effort to provide Washington public librarians and board members with statistics and input-output measures which they may find useful for planning, budgeting, and public relations.

The information included in this publication is available on floppy disk; please send a preformatted 5 1/4 or 3 1/2 inch hi-density diskette to Library Planning and Development, Washington State Library, AJ-11, Olympia, WA 98504-0111 and we will copy the file onto your disk and return it to you.

Jan Walsh, Chief Consultant
Jan Solt, Administrative Assistant



Part I

Introduction

Introduction

Washington Libraries: Public Library Statistics utilizes both input and output measures. At the end of each service population range, i.e. over 100,000, 25,001 - 100,000, 5,001 - 25,000 and 5,000 and under, total and average statistics and average input-output measures are provided. These figures are provided for comparison purposes for use in planning, budgeting and public relations.

In using the measures described in this chapter, remember that performance measure scores are not absolutes. There are no right or wrong scores and performance measures are not precision measures. Most are calculated in percentages and express ratios. Further, performance measures should be used in context. Analyze the library's scores in terms of library goals, objectives, service and financial resources. Be creative in thinking about how the information supplied by these measures can help you improve library services; use them to analyze your services and to work with your local government and your public. No single performance measure tells a complete story. Interpret your performance scores in context with each other and with the library's overall services and budget.

Definitions and Uses of Input Measures

It is important to review the input per capita measures whenever the population of the library's legal service area changes significantly. For instance, if the population to be served increases dramatically, there must be a corresponding increase in expenditures per capita in order to maintain the existing level of operations.

Operating Expenditures Per Capita

(Table 4) Operating expenditures per capita relates the total amount of library funds spent for operating purposes to the number of persons the library is established to serve. It is the dollar amount spent on staff, materials, and other operating expenses divided by the population of the library's legal service area.

This figure approximates the average cost per person of running the library and may be relevant whenever the economy or efficiency of the library's overall operation is an issue.

The cost-effectiveness of library operations may be demonstrated by relating operating expenditures per capita to the output measures which best reflect the range of most frequently used services and programs, as well as the identified role(s) of the library. One can further analyze library expenditures by calculating this measure for budgetary breakouts and by calculating expenditures per registered borrower. For instance, if the library has selected the role of Preschooler's Door to Learning, one might calculate expenditures per registered preschooler.

Expenditures per capita reflect the community's financial support in relation to its size. It can provide important information for elected officials and the general public as they review the budget for the library.

Have the expenditures per capita remained relatively constant while service measures such as circulation per capita have increased? If so, the library has increased the efficiency of its services. However, in a service area which is growing rapidly while the library budget remains static, expenditures per capita and performance measures such as holdings per capita may fall. This indicates that there is a strain on the library's collection and additional funds are needed.

Factors that influence this measure include: economic conditions; changing tax base; demands on local government for all public services in general and library service specifically; community perception of the importance and value of library services political climate; the extent to which central services such as custodial, utility and administrative functions are charged to the library's budget. Projects to increase this score include, but are not limited to: working for increased financial support; organizing a Friends group; conducting a public relations campaign to convey the usefulness, value and importance of good library services; emphasizing the provision of services the community needs and wants the most; becoming politically active and aware; and improving library budgeting skills.

Personnel Expenditures Per Capita

(Table 6) Personnel expenditures per capita relates the amount of funding spent on staff to the number of persons the library is established to serve. It is the dollar amount paid in salaries, wages and benefits divided by the population of the library's legal service area.

The figure indicates the average cost per person of staffing a library. This input measure can be relevant whenever the adequacy of library staffing or performance are issues. The cost-effectiveness of library services may be demonstrated by relating personnel expenditures per capita to output measures which indicate the amount of service received, i.e. circulation per capita, reference transactions per capita, and program attendance per capita.

Other Operating Expenditures Per Capita

(Table 6) This measure relates the amount of funds spent for purposes other than staff and materials to the number of persons the library is established to serve. It is the dollar amount spent on miscellaneous operating expenses, including but not limited to, office supplies, telephone, utilities, divided by the population of the library's legal service area.

This figure approximates the average cost per person of running library facilities and other miscellaneous operations.

This input measure may be relevant whenever the economy or efficiency of the library's day to day operations are an issue. The cost-effectiveness of library operations may be demonstrated by relating this measure to the output measures which best demonstrate the range of most frequently used services and the role of the library.

Collection Expenditures Per Capita

(Table 7) This measure relates the amount of funds which the library spent on materials for the collection, both print and nonprint, to the population of the legal service area. It is the dollar amount spent on materials for the collection divided by the population of the library's legal service area.

This figure indicates the average cost per person of purchasing, but not processing, newly acquired materials.

Collection expenditures per capita is useful whenever the size or usefulness of the collection is an issue. When using this measure to address such issues, is may be helpful to relate it to holdings per capita and to output measures which indicate the usefulness of the materials, such as circulation per capita, ILL net lending rate and ILL's per 1,000 circulation.

Further analysis of collection expenditures per capita can be made by type of material. For instance, if the library sees its role as a Reference Library, there should be a higher collection expenditure per capita in reference materials. Likewise, if the library's role is as a Preschooler's Door to Learning, the collection expenditures in "easy books" should be higher.

Service Population Per Staff

(Table 8) This measure relates the population of the legal service area to the number of full-time equivalent (FTE) staff. Full-time means 40 hours per week, regardless of how many hours the library is open per week. It is the number of persons in the library's legal service area divided by the number of library staff in FTE's.

Service population per staff measures the potential workload to be carried by each member of the library staff and indicates the average number of persons each staff member might serve.

This measure may be important whenever the adequacy of library staffing and staff funding are issues. There should be a corresponding increase in staff to offset any population increase.

Holdings Per Capita

(Table 12) This measure relates the number of items the library owns to the number of persons it was established to serve. It is the number of items in the collection divided by the population of the library's legal service area.

It is a rough measure of the extensiveness of the library's holdings compared to the population, indicating the average number of items held for each person in the library's legal service area.

This measure may be relevant whenever the size of the library's collection is an issue. Factors which influence this measure include: size of the collection; increase or decrease in community size; size of the materials budget; library collection and weeding policies; how the

library defines its holdings. It is important to note that this measure must be interpreted in connection with other measures, since collection size alone is not necessarily an indicator of quality. Turnover rate and circulation per capita can be useful in interpreting this measure.

One can further analyze the library by calculating the following:

- Holdings per capita rates separately by type of material
- Holdings per capita rates separately for adult and juvenile materials
- Holdings per capita rates separately for various classifications within the Dewey Decimal system
- Holdings per capita for special classes of materials for certain users -- large print for the elderly, easy books for toddlers

Output Measures

Registration Per Capita

(Table 8) This measure relates the number of persons registered as borrowers to the number of persons the library is established to serve. It is the number of registrations divided by the population of the library's legal service area.

This measure indicates the percentage of the library's potential users who have registered to borrow materials.

Registration per capita may be relevant whenever public awareness of the library is called into question. This measure indicates the percentage of potential users who know the library exists and, by registering, have implied an intent to use it. Low registration per capita may indicate a need to increase public relations, to evaluate the usefulness of the collection to potential clients and to evaluate overall services. High registration per capita may be useful in justifying increases in input measures such as personnel, collection and/or other operating expenditures per capita.

Further analysis using registration per capita can be made using type or age of the client. If the library's role is as a Preschooler's Door to Learning, there should be a higher percentage of registration by preschoolers.

Circulation Per Capita

(Table 9) This measure compares the number of items your library circulates to the population of the legal service area. It is the number of loans divided by the population of the library's legal service area.

Circulation per capita can be thought of as representing the average number of items checked out to each resident annually.

Factors which may influence this measure include: increase or decrease in the service area's population; increase or decrease in the annual circulation; circulation policies, such as length of loan period; library's hours of service; number of library users; special programs;

age, breadth and condition of the library's collection; number of non-circulating items; community awareness of the library; library acquisitions policies; and physical arrangement, convenience and location of the library.

Circulation per capita is one measure of the community's use of the library. A high score indicates heavy use of the library's materials and may indicate a need to increase collection expenditures per capita. A low score may indicate that the library's collection might not meet the needs or interests of the community or that residents may not be aware of the library's resources. On the other hand, it could mean that the library has a high number of non-circulating materials. This could be confirmed if the library has a high library attendance per capita, a high in-library use per capita, and/or a high reference transaction measure per capita.

To increase this score, library staff might encourage library use by infrequent users or nonusers. They might initiate a public relations campaign and outreach services, increase access to library service by changing hours or by making circulation policies less restrictive, reconsider the acquisitions policy, weed the collection to remove obsolete and worn materials, rearrange the library to improve traffic flow, add directional signs and finding aids, or any combination of these strategies. Lower circulation per capita is a likely result of lower collection expenditures and holdings per capita. It is likely to lead to more interlibrary loans per 1,000 circulation.

The library which has chosen the role of Popular Materials Library should expect a high circulation per capita. Further, the library which has selected the role as Preschooler's Door to Learning should have a high circulation of preschool materials per preschool child in the library's legal service area. However, if the library sees its role as a Research Center or Reference Library, where there is an emphasis on use of non-circulating materials, it may not wish to change a lower score.

One can further analyze the library's use patterns by determining any of the following:

- Circulation separately for adults and juveniles
- Circulation per FTE staff member as a workload measure
- Circulation per registered client
- Percentage of circulation by non-resident users
- Circulation per capita separately for various kinds of materials

Turnover Rate

(Table 9) Turnover rate relates the number of loans of library materials to the size of the collection. It is the number of loans divided by the number of items held in the collection at the end of the year. It measures the activity of your library's collection, indicating the number of times each unit of library material would have circulated during the year if circulation had been spread evenly throughout the collection. This output measure may be relevant whenever use of the collection is an issue. It may be useful to compare this figure to selected inputs such as holdings per capita and outputs such as circulation per capita and interlibrary loans per 1,000 circulation.

Factors which influence this measure include:

- Increase or decrease in annual circulation
- Circulation policies, including loan period and fines
- Special programs, e.g. summer reading program
- Library hours of service
- Library acquisitions and collection development policies
- Community awareness of the library
- Condition, age and breadth of the library's collection
- Physical arrangement and location of the library

This measure relates strongly to the roles and goals the library has set for meeting the needs and desires of the community. A library which emphasizes the circulation of popular reading materials will have a higher turnover rate than a library which emphasizes subject breadth in the collection, such as an independent learning center, or a library which has an extensive reference collection. If the library has placed a priority on high circulation, it will want to increase its turnover rate.

Staff may wish to assess the demands of library users and nonusers and purchase new materials based on that assessment. They might consider purchasing duplicate copies of popular works, attempting to get new books on the shelf faster, removing seldom used materials from the collection, or increasing the number of hours the library is open. Other possible solutions are to make circulation policies less restrictive, conduct a public relations campaign, increase or modify library service hours, rearrange the library and consider purchase of shelving to merchandise parts of the collection.

Possibilities for further analysis include calculating turnover rates for the following: various subject classes of materials; different formats of holdings, i.e. video, periodicals, books; adult and juvenile materials.

ILL Net Lending Rate

(Table 9) This measure relates the number of materials provided to other libraries through interlibrary loan to the number of materials borrowed from other libraries through interlibrary loan. It is the number of items loaned divided by the number of items borrowed.

ILL net lending rate indicates items loaned as a percentage of items borrowed.

This output measure may be relevant whenever the nature of the library's participation in interlibrary loan activities is an issue. It indicates whether the library does more lending (scoring over 1.0) or more borrowing (scoring less than 1.0). Net borrowers may use this figure as evidence of what they gain from participation in ILL activities or in conjunction with collection expenditures per capita, argue for increased financial support for the local collection. Net lenders may use the score to argue that the strengths of their collections need to be maintained.

ILL's Per 1,000 Circulation

(Table 9) Interlibrary loans per 1,000 circulation relates the number of materials borrowed from other libraries to the number of materials from the local collection made available to borrowers. It is the number of ILL requests divided by total circulation multiplied by 1,000.

This output measure indicates the number of interlibrary loans for every 1,000 items circulated from the local collection.

Higher ILL's per 1,000 circulation might indicate better performance by the library as an access point for information not contained in the local collection. On the other hand, lower figures might indicate that the local collection is doing a better job of meeting user needs. The interpretation to make of this measure would depend on the issue at hand as well as on the actual amount of ILL and circulation activity per capita.

Postage and courier delivery activity would also be factors to consider in interpreting this measure. Does the library want to spend a larger amount of postage for access and interlibrary loan or should the funds be allocated for expenditures for a collection which better meets the needs of local library users?

Program Attendance Per Capita

(Table 10) This measure relates attendance at scheduled presentations which are sponsored by the library and deal with information services, on or off the premises, to the number of persons the library is established to serve. It is program attendance divided by the population of the library's legal service area.

This measure indicates the percentage of residents of the library's legal service area who attended a library program during the year.

Program attendance per capita may be relevant whenever the library needs to demonstrate its services to groups, in contrast to services to individuals for which the library would use measures such as circulation and reference.

A library which has chosen the role of Preschooler's Door to Learning or Community Activities Center would expect to have a higher program attendance than a library which has chosen the role of Reference Library, Formal Education Support Center or Research Center.

Library Attendance Per Capita

(Table 11) Library attendance per capita relates the number of visits made to the library to the population of the library's legal service area. It is attendance at the library during a typical week multiplied by 50 (the average number of weeks a public library is open during the year) divided by the population of the library's legal service area.

Attendance per typical week may be estimated by counting the number of persons who enter the library during a typical week (one during which the library is open its regular hours,

with no holidays, and one which is neither very busy or slow). This measure indicates the average number of library visits per person served.

To measure public awareness of the library, library attendance per capita is a better measure than registration per capita. Registration statistics may be out-of-date and, as a result, questionably valid, while attendance statistics reflect actual visits to the library. Taken with in-library use, reference, circulation and program attendance per capita, library attendance per capita can be used to develop an accurate annual profile of use of the library. If the library has a public access catalog which clients can access from home or work, actual visits may not be an accurate portrayal of use.

A library which has selected the role of Community Activity Center would expect to have a higher library attendance per capita.

In-Library Use Per Capita

(Table 11) This measure relates the number of materials used in the library, but not checked out, to the number of persons the library is established to serve. It is in-library use per typical week multiplied by 50 (the average number of weeks a public library is open per year) divided by the population of the library's legal service area.

In-library use per typical week may be determined by counting the number of items to be reshelved or refiled during a typical week.

This measure indicates the average number of items used in the library, but not checked out, per resident of the library's legal service area.

In-library use per capita may be relevant whenever evidence of library use is required. Use of circulation per capita and in-library use per capita will measure the extent that residents turn to the library as a source of useful information. Libraries which have chosen the roles of Research Center, Reference Library, Independent Learning Center or Formal Education Support Center should have higher in-library use per capita than those which have chosen the roles of Popular Materials Library or Preschooler's Door to Learning.

Reference Transactions Per Capita

(Table 11) This measure relates the number of information contacts which involve the knowledge, use, recommendations, interpretation, or instruction in the use of one or more information sources by a staff member to the population of the library's legal service area. It is the number of reference transactions per typical week multiplied by 50 (the average number of weeks a public library is open in a year) divided by the population of the library's legal service area.

This measure indicates the average number of times a resident of the library's legal service area received staff assistance in using information sources available at or accessible through the library.

Reference per capita may be relevant whenever the impact of reference service is an issue. Comparing this figure to circulation and in-library use per capita may be useful in assessing the reference desk as an access point for information available in the local collection. Comparison to ILL's per 1,000 circulation and ILL net lending rate may be useful is assessing access via the reference desk to information that is not available locally.

Those libraries that have selected the roles of Reference Library, Community Information Center, Formal Education Support Center, Independent Learning Center and Research Center should have a higher reference per capita than those that have selected other roles. Those which have chosen Research Center should have the highest reference transaction per capita.

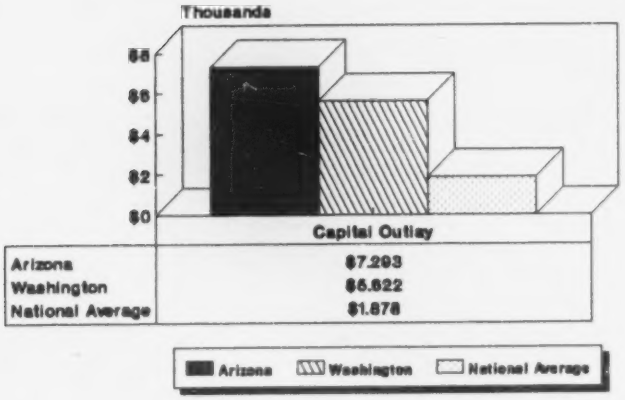
Looking at Washington through a Wide-angled Lens

Because of Washington's participation in the Federal-State Cooperative System for Public Library Data, we are able, for the first time, to compare Washington's data with that of the 49 other states and the District of Columbia. Facts and figures represented in this section are included in Public Libraries in 50 States and the District of Columbia: 1989, and E.D. TAB (NCES 91-343: Data Series DR-LIB-89/90-1.1) published in April, 1991 by the National Center for Education Statistics (NCES) with the cooperation of the U.S National Commission on Libraries and Information Science (NCLIS) and 50 state library agencies including the Washington State Library. The data provided by Washington's public libraries on "Washington Libraries: Annual Report Form" is used to compile the information which is transmitted to the National Center for Education Statistics and included in the publication.

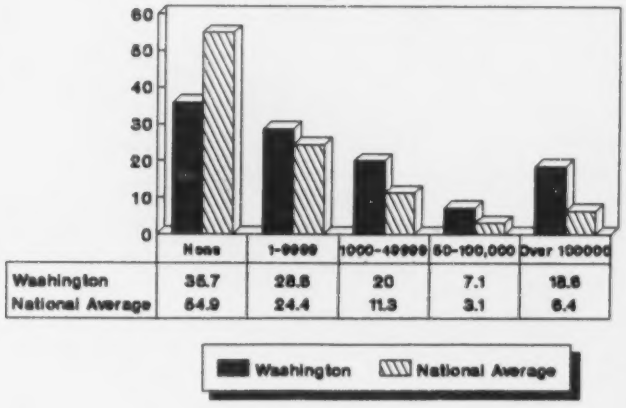
A comparison of Washington's public libraries with those of other states and the District of Columbia provides a snapshot of Washington public libraries at this time. The following charts utilize the 1989 data.

Washington ranks second in the nation, behind Arizona, in capital outlay per 1,000 population, spending almost $4,000 more than the national average.

Capital Outlay Per 1,000 Population
1989

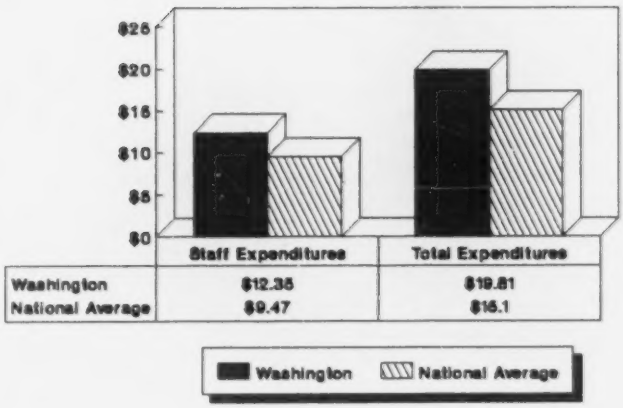


Percent of Libraries
By Capital Outlay Amount

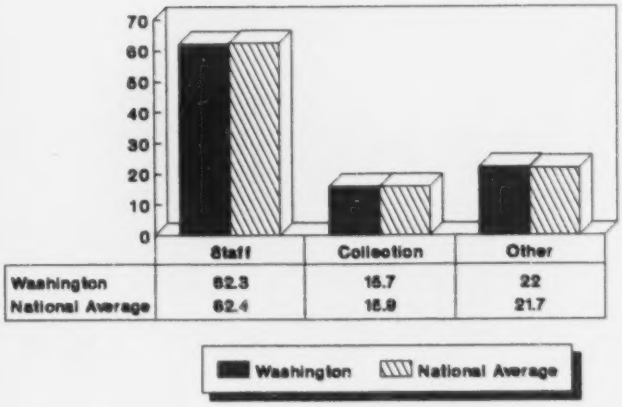


Furthermore, Washington ranks sixth in operating expenditures per capita at $19.81 and ninth in staff expenditures per capita.

Expenditures Per Capita
1989



Percent of Expenditures
By Category of Expenditures



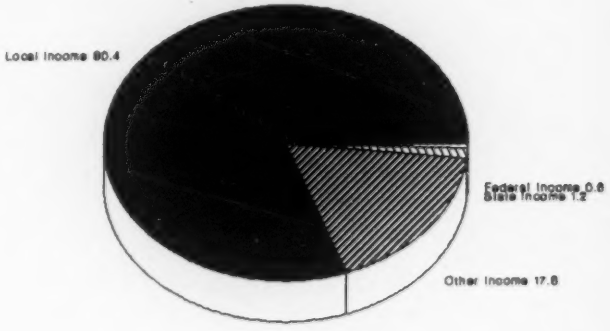
The percentage of total expenditures spent on staff is slightly less that the national average in the staff and collection categories and slightly higher than the average on other expenditures.

In percentage of total income by category of source, the state ranks 27th in percentage of income from local sources, 44th in percentage of income from federal sources, 39th in percentage from state income, and second, behind Maine, in percentage of income from "other" sources. Other income "includes all income other than reported as local government income, state government incomes, and federal government income. It includes, for example, gifts, donations, interest, fines, and fees. It does not include the value of any contributed services or the value of in-kind gifts and donations." (Source: Federal State Cooperatives System for Public Library Data.)

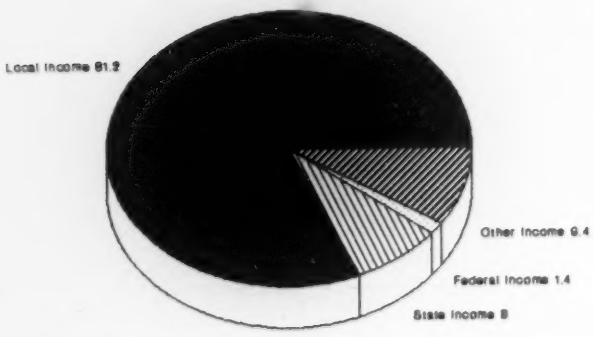
Income Source as Percent
Total Income 1989

	Local income	State income	Federal income	Other income
Washington	80.4	1.2	0.8	17.8
National Average	81.2	8	1.4	9.4

Income Source as Percent of Total Income
Washington, 1989

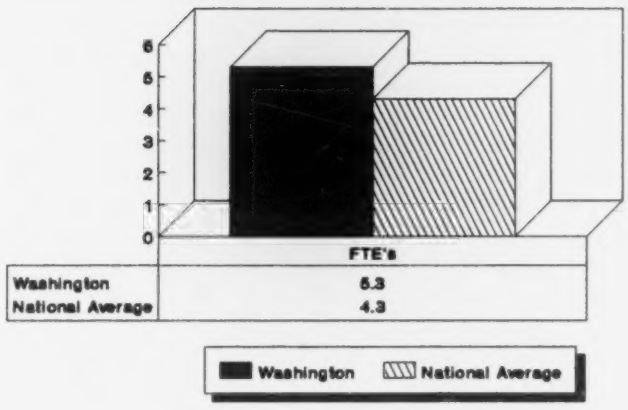


Income Source as Percent of Total Income
National Average, 1989

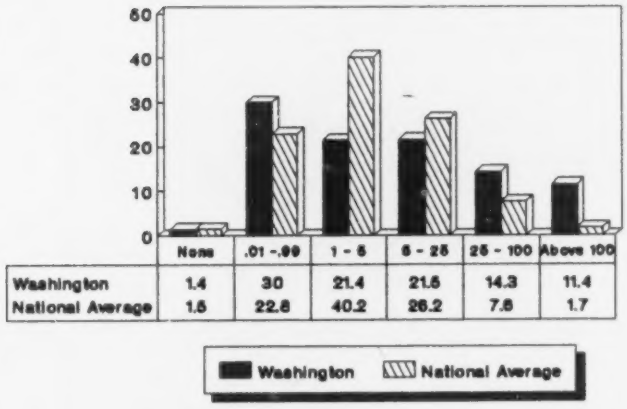


The statistics on staff show that Washington is ranked 13th in paid FTE's per 1,000 population, and is above average in libraries with .01 to .99 FTE and libraries with 25 or more FTE's.

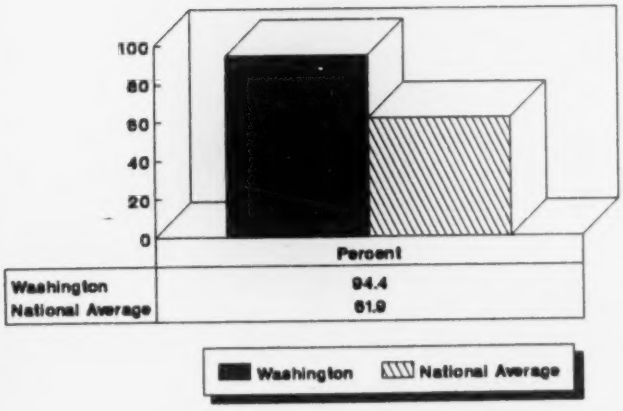
Paid FTE's Per 10,000 Population 1989



Percent Libraries By Number Paid FTE's 1989

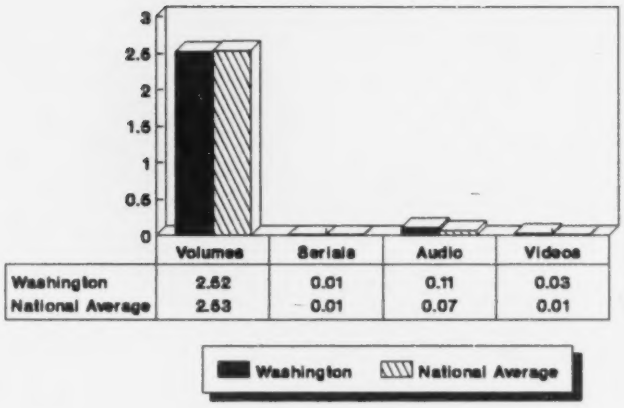


Percent FTE Librarians with ALA/MLS 1989



Furthermore, Washington ranks sixth in percentage of FTE librarians with an MLS from an ALA-accredited program at 94.4%; the five states above all show 100%.

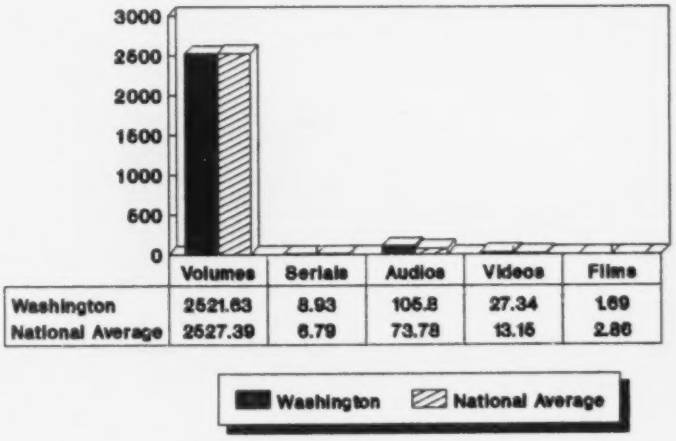
Holdings Per Capita
1989



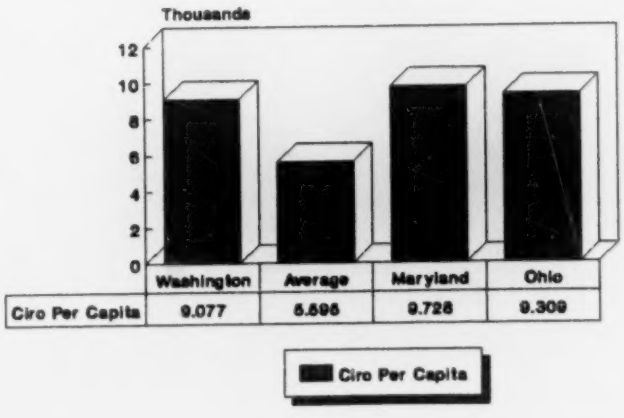
In terms of collection, Washington's public libraries are, rank 27th in volumes held per capita and are below the national average in volumes held per 1,000 population. However, the state ranks seventh in audio per capita, and second in video per capita. In films and serials per capita, Washington ranks 17th and 18th, respectively.

Holdings Per 1,000 Population
1989

In terms of number of holdings per 1,000 population, the state holds more than the average number in serials, audio, and videos and less than the average in films.



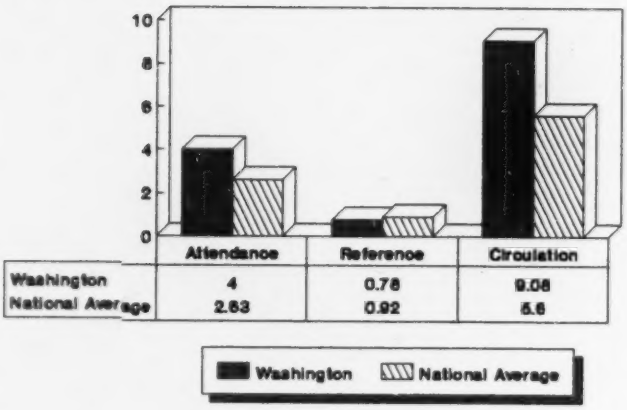
Circulation Per Capita
1989



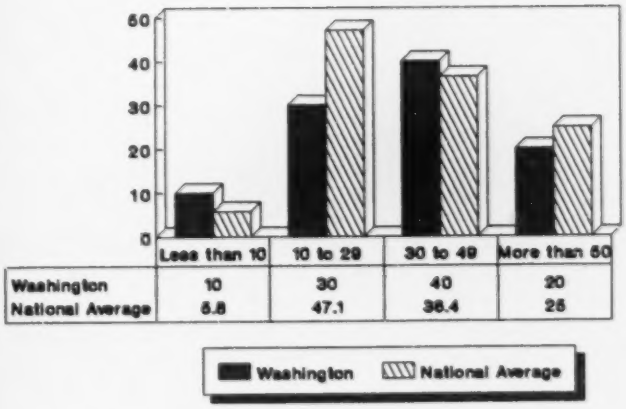
The data also paints a picture of the service provided by the state's libraries. The state of Washington ranked third in circulation per capita at 9.08 items, well above the national average of 5.60 items.

In addition, the state ranked 11th in attendance in library per capita, which is above average, and 16th in reference transactions per capita, below the average.

Service Per Capita
1989

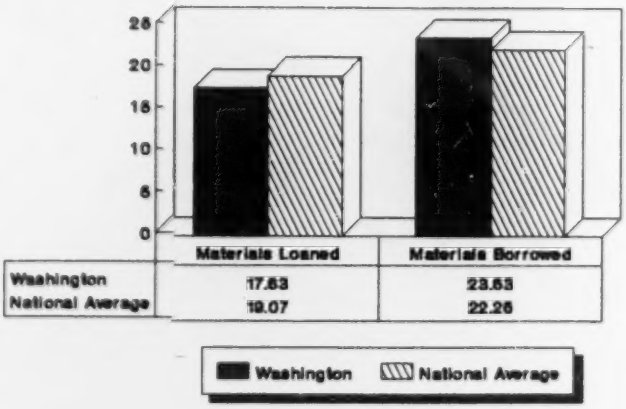


Hours Open
1989



Furthermore, the state was above average in the percent of libraries open less than ten hours a week and those open thirty to forty-nine hours a week, while falling below average in the percent of libraries open ten to twenty-nine and more than sixty hours a week.

Interlibrary Loan Per 1,000 Population
1989



In addition, the state ranks 19th, below the national average, in items loaned on interlibrary loan, and 20th, above the average, in number of materials borrowed on interlibrary loan.

Percent of Total Population Served By Size of Library Service Area

	<5000	5000-24999	25-100,000	100-250,000	>250000
Washington	2.3	4.3	8.8	30.6	54.9
National Average	1.4	16	26.1	17.4	40.4

Finally, the data shows that in Washington the percentage of the state's population served by libraries of less than 5,000 population in the legal service area is greater than the national average, as is the percentage served by libraries whose service area is above 100,000. Indeed, 54.9% of the population of Washington is served by five libraries, all of which serve over 250,000 population.

For further information, and comparisons with libraries of the same size of legal service area population, contact:

Public Libraries: 1990 Statistics

Public Library Summary of Service: 1990

Total State Population 4,798,100 -a-

	Population	Number of Libraries	Percent of State Population
Libraries According to Size of Population Served			
Over 100,000	3,974,908	13	82.84%
25,000 – 100,000	409,890	9	8.54%
5,001 – 25,000	198,847	16	4.14%
5,000 and under	62,243	32	1.30%
Totals	4,645,888	70	96.83%
Libraries According to Operational Income:			
$ 0 – 10,000	11,706	10	0.24%
$ 10,001 – 25,000	13,025	9	0.27%
$ 25,001 – 50,000	7,012	4	0.15%
$ 50,001 – 100,000	28,440	8	0.59%
$ 100,000 – 200,000	46,120	6	0.96%
$ 200,001 – 500,000	154,787	11	3.23%
$ 500,001 – 1,000,000	159,750	5	3.33%
$1,000,000 – 5,000,000	1,510,491	11	31.48%
$5,000,000 – 15,000,000	1,311,817	4	27.34%
Over $15,000,000	1,402,740	2	29.24%
Totals	4,645,888	70	96.83%

Libraries According to Type of Organization/ Operational Expenditures:	Amount Exp.				Expenditures Per Capita
Library Districts -b-	59,848,126	3,349,905	20	69.82%	$17.87
Municipal Libraries	35,141,321	1,295,983	50	27.01%	$27.12
Totals	94,989,447	4,645,888	70	96.83%	$20.45

Counties with Unincorporated Areas Served:	54,399	4	1.13%
Unserved Areas:			
Counties With No Library District	65,485 c	8	1.36%
Municipalities Without Public Library Service	32,328	43	0.67%
	97,813		2.04%

a Population figures based on Office of Financial Mangement document: Population Trends of Washington State, August, 1990.

b Unincorporated areas and annexed and contracting municipalities.

c Excludes municipalities with library service.
